Adi Alfian Hafis

FULL-STACK SOFTWARE ENGINEER

Semarang, Indonesia (Open to Remote / Relocation) • adialfianhafiz@gmail.com • linkedin.com/in/adialfianhafis • github.com/adialfyan • adialllllll.vercel.app

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer and Computer Science graduate (GPA 3.97/4.00) with hands-on experience engineering high-reliability web applications, operational ERPs, and distributed services. Architected institutional financial systems processing bank Virtual Account webhooks with 100% automated ledger reconciliation, and engineered client-side AI biometrics with sub-400ms verification. Proficient in TypeScript, React, Next.js, Laravel, and PostgreSQL with a strong focus on clean architecture, performance optimization, and reliable delivery.

TECHNICAL SKILLS

LANGUAGES	TypeScript, JavaScript (ES6+), PHP (8+), SQL, HTML5, CSS3, Go (Basic)
FRONTEND	React.js, Next.js, Inertia.js, Vue.js (Vue 3), Tailwind CSS, Canvas API, GSAP Motion
BACKEND & APIS	Laravel, Node.js, RESTful APIs, Webhooks, Redis, Microservices Fundamentals, Spatie RBAC
DATABASES & STORAGE	PostgreSQL, MySQL, Database Indexing, Relational Modeling, Transactional Atomicity
DEVOPS & TESTING	Git/GitHub, Docker, Linux VPS Deployment, Playwright E2E Testing, Vite, CI/CD Actions

WORK & PROJECT EXPERIENCE

Acrylico Art & Signage — Full-Stack Software Engineer

AUGUST 2026 — OCTOBER 2026 • SEMARANG, INDONESIA

- Engineered custom **Acrylico ERP** to digitize manufacturing workflows, replacing legacy paper job-tickets with real-time operational boards.
- Implemented edge facial recognition clock-in utilizing @vladmandic/face-api (128-d tensor embeddings), verifying worker attendance in under 400ms entirely client-side without streaming sensitive biometrics to external clouds.
- Built interactive shop floor Kanban ticket boards providing real-time production telemetry across cutting, bending, engraving, and QC workstations.
- Architected progressive billing engine synchronizing quotations, purchase orders, material costs, and down-payment status transitions.
- Authored automated end-to-end test suites using Playwright, validating authentication, attendance biometrics, and invoice states on every release.

Technologies: Vue 3, Inertia.js, Laravel, MySQL, TensorFlow/Face-API, Playwright, Tailwind CSS

Nata Code — Front End Developer

JULY 2026 — OCTOBER 2026 • SEMARANG, INDONESIA

- Architected hybrid SPA client applications using React 18, Inertia.js 2.0, and Laravel, eliminating full-page reload latencies and reducing route transitions to zero.
- Integrated custom WebGL/GLSL shader backgrounds and kinetic viewport motion systems (GSAP ScrollTrigger, Parallax) with smooth frame rates.
- Developed dynamic hardware tier profiling engine (useDeviceTier) assessing device RAM and concurrency to scale animation budgets, sustaining locked 60fps motion across mobile devices.
- Engineered modular service catalog and case-study CMS with instant live search and theme persistence.

Technologies: React 18, TypeScript, Inertia.js, Laravel, GSAP, Canvas API, WebGL, Tailwind CSS, Vite

CV Nastiti Utama Mandiri (Timnas Production) — Full-Stack Software Engineer JANUARY 2026 — MARCH 2026 • SEMARANG, INDONESIA

- Co-developed **Timnas Production ERP**, a centralized operations management platform for regional event campaigns and field personnel.
- Designed dynamic profit margin calculation engine supporting dual management fee formulas (deduction and markup), accelerating financial report generation from weeks to real-time.
- Implemented geospatial Leaflet GPS mapping for live field team dispatching, site location tracking, and attendance verification across Central Java.
- Built structured before/after photo inspection pipeline with client-side image compression, reducing upload bandwidth while ensuring tamper-resistant site logs.
- Configured granular role-based access control (RBAC) using Spatie Laravel Permission, isolating Super Admin, Finance, PM, and Field Staff consoles.

Technologies: Laravel, Inertia.js, React.js, Leaflet Maps, MySQL, Tailwind CSS, Git

MAN 1 Kota Semarang — Full-Stack Software Engineer MARCH 2025 — SEPTEMBER 2026 • SEMARANG, INDONESIA

- Architected and deployed **SIMMAN E-Budgeting**, an institutional financial ERP managing fee collections and budgets across thousands of students.
- Integrated direct Host-to-Host (H2H) banking webhook pipelines, automating 100% of student Virtual Account (VA) payment reconciliation directly into the general ledger without manual human intervention.
- Engineered automated RKA budgeting engine that programmatically enforced hard-locks on departmental spending ceilings, eliminating operational over-expenditures.
- Developed automated bank reconciliation pipeline balancing internal ledger records against daily bank mutation statements, accelerating month-end audit closings from days to instant queries.
- Automated multi-tier PDF and Excel financial audit reports with programmatic validation and hierarchical digital approval workflows.

Technologies: Laravel, PostgreSQL, Redis, RESTful Webhooks, Docker, Linux VPS

EDUCATION & HONORS

Universitas Semarang (USM) — Bachelor of Computer Science (S1 Teknik Informatika) 2022 — 2026 • SEMARANG, INDONESIA

- **Cumulative GPA:** 3.97 / 4.00 (Cum Laude / Highest Distinction)
- **Academic Scholarship (YAU USM):** Recipient of the Academic Achievement Scholarship from Yayasan Alumni Undip & USM for achieving a semester GPA of 3.99.
- **Peer-Reviewed Research (SINTA 2):** First author of "Securing Educational Financial Data Against Insider Threats: A Hybrid Blockchain Approach with Merkle Tree Aggregation" published in Journal of Information Systems and Informatics (August 2026).

CERTIFICATIONS & TECHNICAL TRAINING

MLOps: A Multiple Case Study in Industry — LPKL FTIK Universitas Semarang NOV 2026

Credential: 1488/USM.H4.FTIK/I/2026

Intensive training covering automated data pipelines, model testing, versioning, containerized deployment, and industrial AI integration.

CCNA: Introduction to Networks — Cisco Networking Academy APRIL 2023 — JULY 2023

Network architecture, IPv4/IPv6 addressing, subnetting, Ethernet switching, and routing protocols.

32-hour Business English Course (Grade A / Score 85-100) — BBJ Universitas Semarang JULY 2023 — AUGUST 2023

Professional workplace English communication, presentations, and technical documentation.

Prediction Test of TOEFL (Score 427) & 32-hour Preparation Course — BBJ Universitas Semarang 2023
